

■ CleanWaterWise DI² – Simulated Contaminant Plume Report

Powered by Deterministic Intelligence (DI²)

This document presents a simulated contaminant plume visualization from the CleanWaterWise system. The model identifies potential PFAS and lead risk pathways, using deterministic environmental logic under DI² FastPath governance.

Simulation Map Key

- **PFAS Concentration Zone** – Simulated drift radius for per- and polyfluoroalkyl substances (PFAS)
- **Lead Line Risk Pathways** – Housing overlays corresponding to legacy plumbing and soil contamination routes
- **Schools / Hospitals** – Locations within 0.5 miles of potential exposure boundaries
