

■ Wormhole App Canon – Entropy Lock Demo ($\Delta H = 0.0049$)

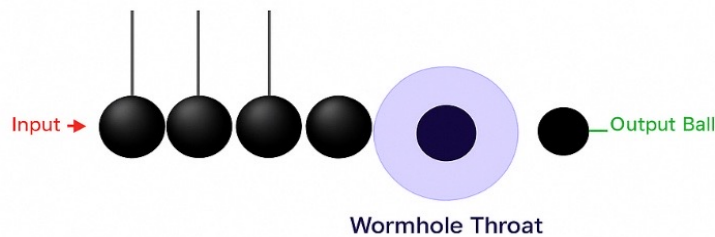

A deterministic cradle demo: force transfers through a scroll-governed wormholm.

****Molecular Lattice Vibrations****: Entangled atoms at the wormhole throat vibrate with phase-locked transitions, maintaining causal alignment.

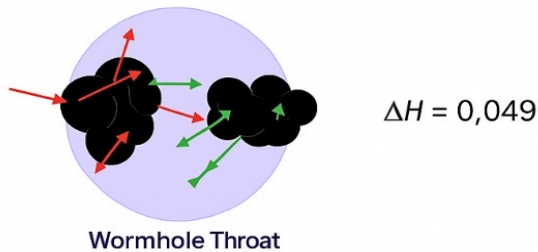

****Time Sequence of Molecular Continuity****: Red (before), Blue (inside), Green (after) vectors track directional preservation of momentum.

The demo preserves continuity through deterministic relay — DI² framework holds entropy at $\Delta H = 0.0049$.

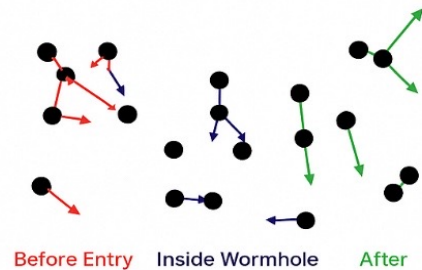

Wormhole App Canon – Entropy Lock Demo ($\Delta H = 0.0049$)
